1. Introduction

This report presents the findings of an AI-driven risk assessment conducted on a set of dummy data representing various potential risks. The purpose of this report is to showcase the ability to identify, assess, and mitigate risks using automated tools and methodologies.

2. Methodology

The risk assessment was conducted using a dataset generated with random values for the following factors:

- Likelihood (1-5): The probability of the risk occurring.
- Impact (1-5): The severity of the risk if it occurs.
- Control Effectiveness (1-5): How well existing controls mitigate the risk.
- Detectability (1-5): The ability to detect the risk before it causes harm.
- Financial Impact (\$): The potential financial loss.
- Operational Impact (1-5): The effect on operations.
- Reputational Impact (1-5): The potential damage to reputation.
